What's Wrong with This?

RSA is the "old-style" PGP key. Most new users of PGP will be expecting a Diffie-Hellman/DSS key.

If you'd like more information on the differences between the two key types, press the Help button, below.

Key Pair Type

Diffie-Hellman/DSS

Detailed Experimental Results

Question: Does the Font Size have an Impact on typing skills?

Test performed on 17 Users

Half tested small to large
Other half tested large to small

Does it make a difference?

Simple Results - Accuracy

Simple Results - Corrected WPM

Result Discussion

There appear to be differences.

Typing with the larger fonts appear to be faster and more accurate.

But are the differences significant or just within the normal variation we would expect to see?

Results in Depth

One independent variable with 2 levels
Font: small (10), large (14)

Independent *t*-Test (two tailed)

Null Hypothesis: There will be no significant difference in typing accuracy with different font sizes.

SPSS Output

Group Statistics

	Font	N	Mean	Std. Deviation	Std. Error Mean
accuracy	small	17	88.4706	12.62001	3.06080
	large	17	91.7647	5.81517	1.41039

Independent Samples Test

		accuracy	
		Equal variances assumed	Equal variances not assumed
Levene's Test for Equality of Variances	F	4.413	
	Sig.	.044	
t-test for Equality of Means	t	-.977	-.977
	df	32	22.501
	Sig. (2-tailed)	.336	.339
	Mean Difference	-3.29412	-3.29412
	Std. Error Difference	3.37012	3.37012
95% Confidence Interval of the Difference	Lower	-10.15882	-10.27430
	Upper	3.57059	3.68606

Look up the critical t value from table

z^*	0.674	0.841	1.036	1.282	1.645	1.960	2.054	2.326	2.576	2.807	3.091	3.291
	50%	60%	70%	80%	90%	95%	96%	98%	99%	99.5%	99.8%	99.9%

Result

$$t = -0.977$$

Critical Value is 2.021 (from t table)

Results

Since the calculated t value is less than the critical value of t , we fail to reject the null hypothesis.

There is no significant difference in typing accuracy between 10 and 14 point fonts.

What about corrected WPM?

Group Statistics

	Font	N	Mean	Std. Deviation	Std. Error Mean
cwpm	small	17	33.6471	16.92979	4.10608
	large	17	37.8824	17.43517	4.22865

Independent Samples Test

		cwpm	
		Equal variances assumed	Equal variances not assumed
Levene's Test for Equality of Variances	F	.023	
	Sig.	.879	
t-test for Equality of Means	t	-.719	-.719
	df	32	31.972
	Sig. (2-tailed)	.478	.478
	Mean Difference	-4.23529	-4.23529
	Std. Error Difference	5.89418	5.89418
	95% Confidence Interval of the Difference	Lower: -16.24134 Upper: 7.77076	-16.24175 7.77116

The Final Results

There is no significant difference in accuracy or corrected words per minute for typists using small or large fonts.

Visually impaired struggle with smart machines

Sunday, April 24, 2005 Posted: 2:09 PM EDT (1809 GMT)

(AP) -- Jay Leventhal, who is blind, still fumbles with the tiny controls on his iPod but has given up on the kiosk in his New York office building that lists all the tenants.

For Leventhal, even laundry has become a task requiring the help of a sighted person. The washers he uses now takes smart cards instead of quarters, issuing instructions on a digital screen that he can't read.

As technology has evolved, it's become lighter, smaller and more portable. For most people, that makes it more convenient. For millions of blind and vision-impaired people, it's anything but.

"The biggest barrier for blind people is access to information, and more and more information is being made available through different machines that aren't designed for people who can't see," says Leventhal, editor in chief of AccessWorld: Technology and People with Visual Impairments.

A set of goggles called JORDY functions like two high-definition television sets, with controls over color, contrast and magnification.

Blind people need a way to communicate with the machines that surround them, he says, from automated tellers to ticketing machines at train stations and airports.

Leventhal and other experts on assistive technology say there's no reason that can't happen. The technology exists in voice chips, image processors, cell phones, cameras and personal digital assistants.

Based on the ideas from Star Trek.

Dialogue Box Guidelines

Internal layout: like that of menus and forms

- Meaningful title, consistent style
- Top-left to bottom-right sequencing
- Clustering and emphasis
- Consistent layouts (margins, grid, whitespace, lines, boxes)
- Consistent terminology, fonts, capitalization, justification
- Standard buttons (OK, Cancel)
- Error prevention by direct manipulation

External relationships

- Smooth appearance and disappearance
- Distinguishable but small boundary
- Size small enough to reduce overlap problems
- Display close to appropriate items
- No overlap of required items
- Easy to make disappear
- Clear how to complete/cancel

Command and Natural Languages

What do these mean?

```
CP TAG DEV E VTSO LOCAL 2  
OPTCD=J F=3871 X=GB12
```

```
grep -v ^$ filea > fileb
```

The Big Problem

Command Languages

Simple Command List

Command plus arguments

COPY FILEA, FILEB

DELETE FILEA

PRINT FILEA, FILEB, FILEC

Command Languages

Command plus options and args
PRINT /3,HQ FILEA
PRINT (3, HQ) FILEA
PRINT FILEA -3, HQ

Symbols vs. Keywords

FIND: /TOOTH/;-1
Backward to "TOOTH"
keywords preferred

	Percentage of Task Completed		Percentage of Erroneous Commands	
	Symbol	Keyword	Symbol	Keyword
Inexperienced users	28	42	19.0	11.0
Familiar users	43	62	18.0	6.4
Experienced users	74	84	9.9	5.6

Command Languages

Keystrokes
Mnemonics
Visual

Naming and Abbreviations

Consistency

Consistency

Inconsistent order of arguments
SEARCH file no, message id
TRIM message id, segment size
REPLACE message id, code no
INVERT group size, message id

Consistent order of arguments
SEARCH message id, file no
TRIM message id, segment size
REPLACE message id, code no
INVERT message id, group size

Abbreviations

Truncation
Vowel Drop
First and Last Letter
First letter of each word
Standard Abbreviations
Phonics

Command Language Guidelines

- Create explicit model of objects and actions.
- Choose meaningful, specific, distinctive names.
- Try to achieve hierarchical structure.
- Provide consistent structure (hierarchy, argument order, action-object).
- Support consistent abbreviation rules (prefer truncation to one letter).
- Offer frequent users the ability to create macros.
- Consider command menus on high-speed displays.
- Limit the number of commands and ways of accomplishing a task.

Natural Languages

"Open the pod bay door Hal"

Simple Sentences

Good for novices

Needs to be Robust

Synonyms
